EDUCATION

Oklahoma State University (OSU) | Ph.D., Computer Science (in-view) [January 2022 - In progress]
• **Research:** Foundation Models (LLMs/VLMs/VLAs/WMs), LoRA fine-tuning, multimodal reasoning, ROS, Mujoco, Pybullet, PyTorch, HuggingFace, LangChain, AWS, Docker, Python
Federal University of Technology, Owerri (FUTO), Nigeria | B.Eng. in Electrical & Electronic Eng October 2013 - October 2018

RELEVANT EXPERIENCE

Graduate Researcher – Machine Learning & AI | **Department of Computer Science, OSU** January 2022 - Present
• Lead research on multimodal foundation models for long-horizon spatial reasoning and robotic manipulation.
• Developed **Unveiler**, a planning-control framework for sequential object retrieval in clutter (94% sim-to-real success).
• Built VLM-RAG pipelines for object grounding (+34% improvement); developed a source-free adaptation method (A3), improving cross-domain performance by 15%.
• Deployed and fine-tuned instruction-tuned VLMs using LoRA with PEFT, gradient checkpointing, and mixed-precision training, enabling GPU-efficient experimentation and private model adaptation.
• Developing logic-augmented spatial reasoning for VLMs via Answer Set Programming (ASP), benchmarking zero-shot performance, and fine-tuning on curated spatial datasets to improve compositional and relational reasoning.
• Designing and training world models (WMs) and latent dynamics models from scratch; fine-tuning on task-specific manipulation data to improve long-horizon planning and spatial reasoning for vision-language-action (VLA) policies.
• Published 5 peer-reviewed papers in ML/robotics venues.

Engineering Intern – Applied ML for Process Systems | **Fractionation Research Inc.** June 2025 - August 2025
• Architected a real-time anomaly detection system for distributed control (50+ sensor streams), reducing false positives by 78% and contributing to 23% reduction in unplanned downtime.

Graduate Student Mentee – Applied ML Research | **Google** February 2023 - June 2025
• Co-developed sequential manipulation policies using visual reasoning, behavior cloning, and reinforcement learning (98% benchmark success).
• Contributed perception module integrating depth-based occlusion reasoning and learned affordances.

NON-RESEARCH PROJECTS

LLM-Powered Research Assistant (Lab-Mate)

- Built a GPT-4o Slack bot to auto-summarize and extract action items from over 100 research meetings.
- Built a RAG pipeline using semantic chunking and vector search; boosted contextual retrieval of lab protocols and discussions to 89% relevance.

VidSearch (Multimodal RAG System)

- Developed a video-grounded QA system with semantic chunking and vector retrieval;
- Used Pinecone for vector storage of transcript embeddings to ground LLM responses in specific video segments.
